

## Robot Operator Position

The robot operator is one of many job positions that the robotic revolution will create. This document specifies the profile of such a person.

This person should have a technical background with an affinity for teaching colleagues how robots work and what they are doing (and also what they are not doing or not capable of).

It is also possible to educate employees that are already in your organization and enable them to be a robot operator in the future. To get a better understanding of the profile of the robot operator the following list of requirements can help you with finding the right candidate.

### Requirements

- Knowledge of programming languages (Python, C++, Golang)
- Understanding of sensors and hardware of the robot
- Broad overview of the mobile robot state of the market and future developments of the market
- Solid english skills to communicate with manufacturers and reading manuals
- Ability to solve problems independently and resistant to stress if a mission critical situation needs to be solved
- Skills in educational mediation of robotic topics and topics of automation in general
